

## Fact Sheet

# 14 Years of the Affordable Care Act: Impact on Adults Ages 50 to 64 in Hawaii

Olivia Dean, Jane Sung, and Catelyn Middlebrooks  
*AARP Public Policy Institute*

The Affordable Care Act (ACA)—now 14 years old—has played a critical role in expanding access to affordable health coverage for millions of adults ages 50 to 64 in Hawaii, including through ACA’s health insurance marketplaces.

## 61%

The drop in the uninsured rate  
among adults ages 50 to 64  
since ACA implementation

Since the start of the ACA, the number of adults ages 50 to 64 in Hawaii with health insurance has increased from 267,553 in 2012 (out of 291,208) to 276,507 in 2022 (out of 285,628). Meanwhile, the share of adults ages 50 to 64 in Hawaii without health insurance (the uninsured rate) has fallen significantly, dropping from 8.1 percent in 2012 to 3.2 percent by 2022. This decline marks a 61 percent drop in the uninsured rate for adults in this age group between 2012 and 2022.<sup>1</sup>

## 3.2%

The share of adults ages 50 to 64  
who remained uninsured in 2022

In 2022, 9,121 people ages 50 to 64 in Hawaii, or 3.2 percent of adults in this age group, remained uninsured. Policy actions have contributed to record-low uninsured rates. One such example is states keeping people enrolled in Medicaid during the COVID-19 pandemic in exchange for enhanced federal funding. Enactment of enhanced federal premium tax credits under the American Rescue Plan Act (ARPA) of 2021 and extended under the Inflation Reduction Act (IRA) of 2022 also helped make Marketplace coverage more affordable.

## 3.4

The percentage-point drop  
in the uninsured rate among  
Asian or Native Hawaiian/  
Pacific Islander adults ages 50  
to 64 between 2012 and 2022

Among adults ages 50 to 64 in Hawaii, uninsured rates improved between 2012 and 2022 across many racial and ethnic groups. Specifically, the uninsured rate in this age group fell from 11.0 percent to 7.4 percent among Hispanic adults, 6.7 percent to 3.3 percent among Asian or Native Hawaiian/Pacific Islander adults, and 10.6 percent to 2.3 percent among white adults.

## 11,938

Adults ages 50 to 64 who relied  
on nongroup (individual)  
health insurance in 2022

As of 2022, 4.2 percent of adults ages 50 to 64 in Hawaii relied on the nongroup (individual) health insurance market for coverage. The number of adults ages 50 to 64 with nongroup coverage went from 10,984 in 2012 to 11,938 in 2022.

**7,051**

Adults ages 55 to 64 who  
enrolled in Marketplace  
coverage in 2024<sup>2</sup>

In 2024, 32 percent of Hawaii enrollees in a Marketplace plan are between the ages of 55 and 64—totaling 7,051 people.

**1,000**

Adults ages 50 to 64 who are  
estimated to become newly  
eligible for Marketplace coverage  
after losing Medicaid<sup>3</sup>

As states lift the COVID-era restrictions on Medicaid disenrollment, many individuals are seeking new sources of affordable health insurance coverage. 1,000 adults ages 50 to 64 in Hawaii are estimated to be newly eligible for Marketplace coverage after losing Medicaid. Of this group, 800 are estimated to be eligible for premium tax credits, including the enhanced premium tax credits under ARPA and IRA.

**18,259**

Marketplace enrollees who pay  
reduced or no premiums in 2024  
due to federal tax credits<sup>2</sup>

Totaling 18,259 people, the majority (82 percent) of Marketplace enrollees of all ages in Hawaii pay reduced or no health insurance premiums due to availability of federal premium tax credits.

**\$248**

The average monthly  
Marketplace premium after  
premium tax credits in 2024<sup>2</sup>

On average nationally, consumers (regardless of age) who receive premium tax credits in 2024 save more than \$700 per year on premiums due to the expanded tax credits under ARPA and IRA. On average in Hawaii, Marketplace plan premiums are \$248 per month after tax credits, but 11 percent of Marketplace enrollees pay even lower premiums: \$10 or less per month.
