14 Years of the Affordable Care Act: Impact on Adults Ages 50 to 64 in Mississippi

Olivia Dean, Jane Sung, and Catelyn Middlebrooks
AARP Public Policy Institute

The Affordable Care Act (ACA)—now 14 years old—has played a critical role in expanding access to affordable health coverage for millions of adults ages 50 to 64 in Mississippi, including through ACA’s health insurance marketplaces.

38%

The drop in the uninsured rate
among adults ages 50 to 64
since ACA implementation

Since the start of the ACA, the number of adults ages 50 to 64 in Mississippi with health insurance has increased from 444,191 in 2012 (out of 541,842) to 463,721 in 2022 (out of 522,421). Meanwhile, the share of adults ages 50 to 64 in Mississippi without health insurance (the uninsured rate) has fallen significantly, dropping from 18.0 percent in 2012 to 11.2 percent by 2022. This decline marks a 38 percent drop in the uninsured rate for adults in this age group between 2012 and 2022.¹

11.2%

The share of adults ages 50 to 64
who remained uninsured in 2022

In 2022, 58,700 people ages 50 to 64 in Mississippi, or 11.2 percent of adults in this age group, remained uninsured. Policy actions have contributed to record-low uninsured rates. One such example is states keeping people enrolled in Medicaid during the COVID-19 pandemic in exchange for enhanced federal funding. Enactment of enhanced federal premium tax credits under the American Rescue Plan Act (ARPA) of 2021 and extended under the Inflation Reduction Act (IRA) of 2022 also helped make Marketplace coverage more affordable.

9.9

The percentage-point drop
in the uninsured rate among
Black adults ages 50 to 64
between 2012 and 2022

Among adults ages 50 to 64 in Mississippi, uninsured rates improved between 2012 and 2022 across some racial and ethnic groups. Specifically, the uninsured rate in this age group fell from 20.5 percent to 10.6 percent among Black adults, compared to 16.2 percent to 10.9 percent among white adults.

47,685

Adults ages 50 to 64 who relied
on nongroup (individual)
health insurance in 2022

As of 2022, 9.1 percent of adults ages 50 to 64 in Mississippi relied on the nongroup (individual) health insurance market for coverage. The number of adults ages 50 to 64 with nongroup coverage went from 25,076 in 2012 to 47,685 in 2022.

63,124

Adults ages 55 to 64 who enrolled in Marketplace coverage in 2024²

In 2024, 22 percent of Mississippi enrollees in a Marketplace plan are between the ages of 55 and 64—totaling 63,124 people.

9,000

Adults ages 50 to 64 who are estimated to become newly eligible for Marketplace coverage after losing Medicaid³

As states lift the COVID-era restrictions on Medicaid disenrollment, many individuals are seeking new sources of affordable health insurance coverage. 9,000 adults ages 50 to 64 in Mississippi are estimated to be newly eligible for Marketplace coverage after losing Medicaid. Of this group, 8,000 are estimated to be eligible for premium tax credits, including the enhanced premium tax credits under ARPA and IRA.

280,895

Marketplace enrollees who pay reduced or no premiums in 2024 due to federal tax credits²

Totaling 280,895 people, the majority (98 percent) of Marketplace enrollees of all ages in Mississippi pay reduced or no health insurance premiums due to availability of federal premium tax credits.

\$36

The average monthly Marketplace premium after premium tax credits in 2024²

On average nationally, consumers (regardless of age) who receive premium tax credits in 2024 save more than \$700 per year on premiums due to the expanded tax credits under ARPA and IRA. On average in Mississippi, Marketplace plan premiums are \$36 per month after tax credits, but 66 percent of Marketplace enrollees pay even lower premiums: \$10 or less per month.
