

## Fact Sheet

# 14 Years of the Affordable Care Act: Impact on Adults Ages 50 to 64 in Nevada

Olivia Dean, Jane Sung, and Catelyn Middlebrooks  
*AARP Public Policy Institute*

The Affordable Care Act (ACA)—now 14 years old—has played a critical role in expanding access to affordable health coverage for millions of adults ages 50 to 64 in Nevada, including through ACA's health insurance marketplaces.

## 47%

The drop in the uninsured rate  
among adults ages 50 to 64  
since ACA implementation

Since the start of the ACA, the number of adults ages 50 to 64 in Nevada with health insurance has increased from 402,950 in 2012 (out of 512,767) to 542,786 in 2022 (out of 612,895). Meanwhile, the share of adults ages 50 to 64 in Nevada without health insurance (the uninsured rate) has fallen significantly, dropping from 21.4 percent in 2012 to 11.4 percent by 2022. This decline marks a 47 percent drop in the uninsured rate for adults in this age group between 2012 and 2022.<sup>1</sup>

## 11.4%

The share of adults ages 50 to 64  
who remained uninsured in 2022

In 2022, 70,109 people ages 50 to 64 in Nevada, or 11.4 percent of adults in this age group, remained uninsured. Policy actions have contributed to record-low uninsured rates. One such example is states keeping people enrolled in Medicaid during the COVID-19 pandemic in exchange for enhanced federal funding. Enactment of enhanced federal premium tax credits under the American Rescue Plan Act (ARPA) of 2021 and extended under the Inflation Reduction Act (IRA) of 2022 also helped make Marketplace coverage more affordable.

## 16.1

The percentage-point drop  
in the uninsured rate among  
Asian adults ages 50 to 64  
between 2012 and 2022

Among adults ages 50 to 64 in Nevada, uninsured rates improved between 2012 and 2022 across many racial and ethnic groups. Specifically, the uninsured rate in this age group fell from 37.1 percent to 22.6 percent among Hispanic adults, 26.6 percent to 10.5 percent among Asian adults, 31.9 percent to 24.4 percent among American Indian/Alaska Native adults, 22.5 percent to 10.7 percent among Black adults, and 16.7 percent to 7.2 percent among white adults.

## 31,920

Adults ages 50 to 64 who relied  
on nongroup (individual)  
health insurance in 2022

As of 2022, 5.2 percent of adults ages 50 to 64 in Nevada relied on the nongroup (individual) health insurance market for coverage. The number of adults ages 50 to 64 with nongroup coverage went from 27,932 in 2012 to 31,920 in 2022.

# 27,492

Adults ages 55 to 64 who enrolled in Marketplace coverage in 2024<sup>2</sup>

In 2024, 28 percent of Nevada enrollees in a Marketplace plan are between the ages of 55 and 64—totaling 27,492 people.

# 1,000

Adults ages 50 to 64 who are estimated to become newly eligible for Marketplace coverage after losing Medicaid<sup>3</sup>

As states lift the COVID-era restrictions on Medicaid disenrollment, many individuals are seeking new sources of affordable health insurance coverage. 1,000 adults ages 50 to 64 in Nevada are estimated to be newly eligible for Marketplace coverage after losing Medicaid. Of this group, 1,000 are estimated to be eligible for premium tax credits, including the enhanced premium tax credits under ARPA and IRA.

# 85,178

Marketplace enrollees who pay reduced or no premiums in 2024 due to federal tax credits<sup>2</sup>

Totaling 85,178 people, the majority (86 percent) of Marketplace enrollees of all ages in Nevada pay reduced or no health insurance premiums due to availability of federal premium tax credits.

# \$154

The average monthly Marketplace premium after premium tax credits in 2024<sup>2</sup>

On average nationally, consumers (regardless of age) who receive premium tax credits in 2024 save more than \$700 per year on premiums due to the expanded tax credits under ARPA and IRA. On average in Nevada, Marketplace plan premiums are \$154 per month after tax credits, but 14 percent of Marketplace enrollees pay even lower premiums: \$10 or less per month.
