14 Years of the Affordable Care Act: Impact on Adults Ages 50 to 64 in New Hampshire

Olivia Dean, Jane Sung, and Catelyn Middlebrooks
AARP Public Policy Institute

The Affordable Care Act (ACA)—now 14 years old—has played a critical role in expanding access to affordable health coverage for millions of adults ages 50 to 64 in New Hampshire, including through ACA’s health insurance marketplaces.

60%

The drop in the uninsured rate
among adults ages 50 to 64
since ACA implementation

Since the start of the ACA, the number of adults ages 50 to 64 in New Hampshire with health insurance has increased from 262,634 in 2012 (out of 299,734) to 300,761 in 2022 (out of 316,395). Meanwhile, the share of adults ages 50 to 64 in New Hampshire without health insurance (the uninsured rate) has fallen significantly, dropping from 12.4 percent in 2012 to 4.9 percent by 2022. This decline marks a 60 percent drop in the uninsured rate for adults in this age group between 2012 and 2022.¹

4.9%

The share of adults ages 50 to 64
who remained uninsured in 2022

In 2022, 15,634 people ages 50 to 64 in New Hampshire, or 4.9 percent of adults in this age group, remained uninsured. Policy actions have contributed to record-low uninsured rates. One such example is states keeping people enrolled in Medicaid during the COVID-19 pandemic in exchange for enhanced federal funding. Enactment of enhanced federal premium tax credits under the American Rescue Plan Act (ARPA) of 2021 and extended under the Inflation Reduction Act (IRA) of 2022 also helped make Marketplace coverage more affordable.

23,855

Adults ages 50 to 64 who relied
on nongroup (individual)
health insurance in 2022

As of 2022, 7.5 percent of adults ages 50 to 64 in New Hampshire relied on the nongroup (individual) health insurance market for coverage. The number of adults ages 50 to 64 with nongroup coverage went from 13,605 in 2012 to 23,855 in 2022.

21,159

Adults ages 55 to 64 who
enrolled in Marketplace
coverage in 2024²

In 2024, 32 percent of New Hampshire enrollees in a Marketplace plan are between the ages of 55 and 64—totaling 21,159 people.

3,000

Adults ages 50 to 64 who are estimated to become newly eligible for Marketplace coverage after losing Medicaid³

As states lift the COVID-era restrictions on Medicaid disenrollment, many individuals are seeking new sources of affordable health insurance coverage. 3,000 adults ages 50 to 64 in New Hampshire are estimated to be newly eligible for Marketplace coverage after losing Medicaid. Of this group, 2,000 are estimated to be eligible for premium tax credits, including the enhanced premium tax credits under ARPA and IRA.

46,775

Marketplace enrollees who pay reduced or no premiums in 2024 due to federal tax credits²

Totalling 46,775 people, the majority (72 percent) of Marketplace enrollees of all ages in New Hampshire pay reduced or no health insurance premiums due to availability of federal premium tax credits.

\$202

The average monthly Marketplace premium after premium tax credits in 2024²

On average nationally, consumers (regardless of age) who receive premium tax credits in 2024 save more than \$700 per year on premiums due to the expanded tax credits under ARPA and IRA. On average in New Hampshire, Marketplace plan premiums are \$202 per month after tax credits, but 18 percent of Marketplace enrollees pay even lower premiums: \$10 or less per month.
