14 Years of the Affordable Care Act: Impact on Adults Ages 50 to 64 in Utah

Olivia Dean, Jane Sung, and Catelyn Middlebrooks
AARP Public Policy Institute

The Affordable Care Act (ACA)—now 14 years old—has played a critical role in expanding access to affordable health coverage for millions of adults ages 50 to 64 in Utah, including through ACA’s health insurance marketplaces.

36%

The drop in the uninsured rate
among adults ages 50 to 64
since ACA implementation

Since the start of the ACA, the number of adults ages 50 to 64 in Utah with health insurance has increased from 362,846 in 2012 (out of 410,748) to 449,334 in 2022 (out of 485,710). Meanwhile, the share of adults ages 50 to 64 in Utah without health insurance (the uninsured rate) has fallen significantly, dropping from 11.7 percent in 2012 to 7.5 percent by 2022. This decline marks a 36 percent drop in the uninsured rate for adults in this age group between 2012 and 2022.¹

7.5%

The share of adults ages 50 to 64
who remained uninsured in 2022

In 2022, 36,376 people ages 50 to 64 in Utah, or 7.5 percent of adults in this age group, remained uninsured. Policy actions have contributed to record-low uninsured rates. One such example is states keeping people enrolled in Medicaid during the COVID-19 pandemic in exchange for enhanced federal funding. Enactment of enhanced federal premium tax credits under the American Rescue Plan Act (ARPA) of 2021 and extended under the Inflation Reduction Act (IRA) of 2022 also helped make Marketplace coverage more affordable.

9.0

The percentage-point drop
in the uninsured rate among
Hispanic adults ages 50 to
64 between 2012 and 2022

Among adults ages 50 to 64 in Utah, uninsured rates improved between 2012 and 2022 across several racial and ethnic groups. Specifically, the uninsured rate in this age group fell from 32.0 percent to 23.0 percent among Hispanic adults, 15.3 percent to 8.4 percent among Asian adults, and 9.6 percent to 5.0 percent among white adults.

59,675

Adults ages 50 to 64 who relied
on nongroup (individual)
health insurance in 2022

As of 2022, 12.3 percent of adults ages 50 to 64 in Utah relied on the nongroup (individual) health insurance market for coverage. The number of adults ages 50 to 64 with nongroup coverage went from 28,484 in 2012 to 59,675 in 2022.

45,635

Adults ages 55 to 64 who enrolled in Marketplace coverage in 2024²

In 2024, 12 percent of Utah enrollees in a Marketplace plan are between the ages of 55 and 64—totaling 45,635 people.

6,000

Adults ages 50 to 64 who are estimated to become newly eligible for Marketplace coverage after losing Medicaid³

As states lift the COVID-era restrictions on Medicaid disenrollment, many individuals are seeking new sources of affordable health insurance coverage. 6,000 adults ages 50 to 64 in Utah are estimated to be newly eligible for Marketplace coverage after losing Medicaid. Of this group, 6,000 are estimated to be eligible for premium tax credits, including the enhanced premium tax credits under ARPA and IRA.

349,705

Marketplace enrollees who pay reduced or no premiums in 2024 due to federal tax credits²

Totaling 349,705 people, the majority (95 percent) of Marketplace enrollees of all ages in Utah pay reduced or no health insurance premiums due to availability of federal premium tax credits.

\$67

The average monthly Marketplace premium after premium tax credits in 2024²

On average nationally, consumers (regardless of age) who receive premium tax credits in 2024 save more than \$700 per year on premiums due to the expanded tax credits under ARPA and IRA. On average in Utah, Marketplace plan premiums are \$67 per month after tax credits, but 50 percent of Marketplace enrollees pay even lower premiums: \$10 or less per month.
