Missouri

State Outlook

As Missouri's population ages, older residents will play a critical role in the state's economic recovery and growth. Even after accounting for the impact of COVID-19, Missouri’s aging population will continue to make economic and social contributions that benefit people of all ages, and the growth of this age group will fuel innovation and new market solutions. Policymakers, business leaders, and elected officials must ensure programs and policies are in place to support and grow this economic engine.

Key findings:

Missouri's 50-plus population creates outsize economic impact and will drive economic growth for the next 30 years. In 2018, the 50-plus population accounted for 37% of Missouri’s population, yet contributed 41%—or $134 billion—of the state’s total GDP. Their activities also supported 1.7 million jobs and generated $96 billion in wages and salaries. Their contribution to GDP is forecast to reach $430 billion in 2050—over 44% of the state's projected GDP—when people 50-plus will account for 41% of the population.

The purchasing power of Missouri's 50-plus population will generate tax revenue for decades to come. In 2018, the market activities of people 50-plus supported $9.3 billion in state and local taxes (38% of Missouri’s total). That figure will more than triple to $34 billion by 2050.

(% share by county in 2018)
Unpaid contributions

Beyond their economic contributions, the 50-plus cohort also spends time engaging in vital activities like volunteering and caregiving for children and adults. The 50-plus population in Missouri contributed $4.6 billion in volunteering activities and $6.3 billion in unpaid caregiving in 2018, with the average person spending 123 hours on volunteering and almost 230 hours on caregiving over the entire year.

The 50-plus population provides $11 billion in unpaid contributions

50-plus households accounted for 58 cents of every dollar spent in Missouri in 2018—this will grow to 62 cents (62%) by 2050

The market activities of Missouri’s 50-plus population create jobs, wages, and salaries

In 2030, the 50-plus population’s activities will support 1.8 million jobs in Missouri, driving employment growth across all age groups and industries. Most of these jobs will be created in health services; wholesale and retail trade; professional and business services; and government (see chart on right).

Labor force: People age 50-plus will continue to play a significant role as part of Missouri’s workforce: by 2030, 50-plus workers in the state are projected to number 1.1 million, representing 33% of the state’s total labor force.

Methodology: This state profile details the contribution of the 50-plus population, both in-state and through interstate commerce, to Missouri’s economy. The overall impact includes the direct effects of their spending, work contributions, and taxes paid. It also includes the ripple effects this generates—via business supply chains and through the wages and spending of other workers. All forecasts account for the effects of COVID-19 on U.S. demographic and economic projections. These forecasts were informed by data from the Centers for Disease Control and Prevention, the Bureau of Economic Analysis, Bureau of Labor Statistics, and The Economist Intelligence Unit’s macroeconomic forecasts.
