Key Findings

Millions of adults age 18 and older take vitamins or dietary supplements for a variety of different reasons. The oldest generations of adults tend to take supplements at a higher rate than younger generations and a subset of these adults take supplements to maintain or improve their brain health or delay or reverse dementia. According to the Global Council on Brain Health (GCBH) in the document entitled “The Real Deal on Brain Health Supplements,” there is little evidence to suggest that vitamins and dietary supplements are beneficial to brain health.¹

More older adults take supplements. Three-quarters of the Silent and Greatest generations currently take a vitamin or dietary supplement compared to fewer than six in 10 of all adults age 18 and older.

The top concerns about vitamins and dietary supplements include the effectiveness, safety, and purity of the ingredients.

Many adults mistakenly believe that the safety and effectiveness of vitamins and dietary supplements are regulated by the Food and Drug Administration (FDA) before they can be sold. In fact, the FDA can only challenge the safety and effectiveness of these products after they reach the marketplace.

Key Findings (cont.)

Self-reported brain health is no different for those who take any type of supplements now, took them in the past, or have never taken them.

Over one-third of adults in the Silent or Greatest generation currently take a supplement under the false assumption it will reverse or prevent dementia or maintain or improve brain health compared to less than one-quarter of all adults age 18 and older.

Adults who have never taken a supplement for a brain-related reason are more likely to say their brain health is excellent or very good compared to those who took a supplement in the past.

Healthy eating is a key driver in self-reported brain health. Adults age 18 and older who eat the recommended amounts of fruits and vegetables\(^2\) report better brain health regardless of whether or not they take supplements. Furthermore, those who meet these dietary guidelines also engage in other healthy habits.

\(^2\) From: https://www.choosemyplate.gov/ (Amount varies by age and gender)
ATTITUDES AND USE OF SUPPLEMENTS
Supplement use is higher among women, adults 55 and older, and those with higher levels of education

Boomers and members of the Silent/Greatest generations (about 66 million people³ age 55 and older) currently take supplements at a higher rate than younger generations as do more women and those with a higher level of education. No differences were noted by race/ethnicity.

Percent who currently take vitamins or dietary supplements, by generation, gender, and education

Q6: Have you ever taken vitamins or dietary supplements? Yes, in the past; Yes, and I currently am; No

Majority see supplements positively

Large majorities of adults age 18 and older view vitamins and supplements positively. A majority currently take supplements and very few have never taken them.

Importance* of supplements to health

- Extremely/very: 43%
- Somewhat: 42%
- Not very/not at all: 12%

Usefulness of supplements to health

- Extremely/very: 46%
- Somewhat: 42%
- Not very/not at all: 12%

Have you ever taken supplements

- Yes, currently: 58%
- Yes, in the past: 30%
- No: 12%

*81% of adults age 50 and older say that taking vitamins or dietary supplement is at least somewhat important to health.

Q3: How important do you feel each of the following activities are to your health? [Taking vitamins or dietary supplements] Extremely important, very important, somewhat important, not very important, not at all important

Q4: In general, how useful are vitamins or dietary supplements to health? Extremely useful, very useful, somewhat useful, not very useful, not at all useful

Q6: Have you ever taken vitamins or dietary supplements? Yes, in the past; Yes, and I currently am; No
Some currently take or have taken a supplement for their brain health

Overall, nearly one-quarter (23%) of adults age 18 and older currently take a supplement to maintain or improve brain health or delay or reverse dementia.

Percent who currently take or previously took a vitamin or dietary supplement for each brain-related issue

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons … No, never; Yes, currently taking; Yes, took in the past
Older adults are more likely to take supplements for brain health

With age, supplement use for brain health increases. More than one-third of the oldest generations take a supplement for any one of the four brain-related reasons mentioned. This represents approximately 8.5 million people age 74 and older, 30 million age 50 and older, and 58 million age 18 and older.

*There is no evidence to suggest that dietary supplements reverse or delay dementia. Global Council on Brain Health (2019). “The Real Deal on Brain Health Supplements: GCBH Recommendations on Vitamins, Minerals and Other Dietary Supplements.” Available at GlobalCouncilOnBrainHealth.org; DOI: https://doi.org/10.26419/pia.00094.001

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons … No, never; Yes, currently taking; Yes, took in the past

Significantly more adults age 70 and older take a supplement to reverse dementia compared to adults up to age 69

There is no evidence that any supplement is effective in the reversal of dementia yet more than one in 10 adults age 70 and older currently take a supplement to do just that. This represents nearly 4.5 million adults\(^5\).

**Percent who currently take a supplement to reverse dementia, by selected age groups**

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons: Reversing dementia … No, never; Yes, currently taking; Yes, took in the past

Dietary supplements’ relationship to health is rated higher by some groups

Significantly more women than men said supplements are extremely or very important and extremely or very useful. Compared to the general population, significantly more African American/Black adults and Hispanic/Latino adults rated supplements high in importance and usefulness.

Q3: How important do you feel each of the following activities are to your health? [Taking vitamins or dietary supplements] Extremely important, very important, somewhat important, not very important, not at all important

Q4: In general, how useful are vitamins or dietary supplements to health? Extremely useful, very useful, somewhat useful, not very useful, not at all useful
Older generations take vitamins or dietary supplements often

When asked how frequently they took vitamins or dietary supplements in the previous week, more Boomers and members of the Silent/Greatest generations took them 5-7 days per week compared to younger generations.

Percent who took vitamins or dietary supplements 5-7 days in the previous week*, by generation

* 69% of adults age 50 and older took a vitamin or dietary supplement at least three days in the prior week.

Q11: Below is a list of ways you might have felt or behaved. Please tell me how often you engaged in these activities during the past week. I took vitamins or dietary supplements. Never, Rarely (less than 1 day), Some or a little of the time (1-2 days), occasionally or a moderate amount of time (3-4 days), Most or all of the time (5-7 days)
The effectiveness of the ingredients is the top concern about supplements

The safety and purity of the ingredients are the other top concerns among adults age 18 and older related to vitamins or dietary supplements.

Level of concern about each aspect of vitamins or dietary supplements

</tr>
</tbody>
</table>

Similar to adults overall, a majority of adults age 50 and older are concerned about the purity (76%), effectiveness (76%), and safety (71%) of the ingredients, along with the thoroughness of the government review (73%).

Q10: Please indicate how concerned, if at all, you are about each of the following as it relates to vitamins or dietary supplements. Extremely concerned, Very concerned, Somewhat concerned, Not very concerned, Not at all concerned.
Many mistakenly believe the Food and Drug Administration (FDA) regulates dietary supplements before they are sold

Many adults age 18 and older believe the FDA regulates dietary supplements for pre-market safety and effectiveness. The FDA does not require safety and effectiveness to be proven before dietary supplements can be sold.

Q33: The Food and Drug (FDA) is responsible for regulating certain products used by consumers before they can be sold. To the best of your knowledge, which of the following types of products must be determined by the FDA to be safe and effective before they are sold? No, Yes, regulates

- Prescription drugs
- Food
- OTC drugs
- Medical devices
- Beverages
- Dietary supplements - vitamins and minerals
- Dietary supplements - herbs and enzymes
- Cosmetics

Percent who answered “yes”

- Age 18+
- Age 50+
Adults who generally eat well are more likely to take supplements

Frequency of eating nutritious and well-balanced meals

<table>
<thead>
<tr>

</tr>
<tr>
<td>&lt; 1 day</td>
<td>36%</td>
</tr>
<tr>
<td>Never</td>
<td>32%</td>
</tr>
</tbody>
</table>

Adults age 18 and older who eat nutritious meals more often are significantly more likely to also take a vitamin or dietary supplement.

Q11: Below is a list of ways you might have felt or behaved. Please tell me how often you engaged in these activities during the past week. [I ate nutritious and well-balanced meals] Never, rarely (less than 1 day), some or a little of the time (1-2 days), occasionally or a moderate amount of time (3-4 days), most or all of the time (5-7 days)
SUPPLEMENTS AND BRAIN HEALTH
Current or past supplement users do not report significantly better overall health or brain health

Most adults age 18 and older report their brain health as excellent or very good. There are no significant differences in self-reported brain health by supplement use history. Overall and by historical vitamin or dietary supplement use, about half rate their overall health as excellent or very good. This suggests that in general terms, current or past use of supplements is not related to self-reported brain or overall health.

Percent who rate their brain health and overall health as excellent or very good by “have you ever taken vitamins or dietary supplements”

Q2: How would you describe your overall health at this point in time? Would you say it is excellent, very good, good, fair or poor?
Q5: How would you describe each of the following at this point in time? Would you say it is excellent, very good, good, fair, or poor? [Your brain health or mental sharpness]
Q6: Have you ever taken vitamins or dietary supplements? Vitamins or dietary supplements can be taken in pills, capsules, liquids, gummies, or powders. Yes, in the past; Yes, and I currently am; No
Many believe supplements are effective for brain health

Large majorities of adults age 18 and older believe vitamins or dietary supplements are at least somewhat effective in maintaining or improving brain health or mental sharpness and nearly half feel supplements are at least somewhat effective in reversing dementia.

Perceived effectiveness of vitamins or dietary supplements for each brain-related issue

- **Maintaining brain health or mental sharpness**
  - Extremely/very: 26%
  - Somewhat: 47%
  - Not very/not at all: 27%

- **Improving brain health or mental sharpness**
  - Extremely/very: 23%
  - Somewhat: 50%
  - Not very/not at all: 27%

- **Delaying dementia**
  - Extremely/very: 17%
  - Somewhat: 44%
  - Not very/not at all: 39%

- **Reversing dementia**
  - Extremely/very: 14%
  - Somewhat: 34%
  - Not very/not at all: 52%

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons … No, never; Yes, currently taking; Yes, took in the past
Some racial and ethnic groups are more likely to believe that supplements are effective

African American/Black and Hispanic/Latino adults age 18 and older are more likely than non-Hispanic white adults and adults overall to believe vitamins or dietary supplements are extremely or very effective in maintaining or improving brain health or mental sharpness. However, they are not more likely to take supplements compared to adults overall.

Percent who say taking vitamins or dietary supplements is extremely or very effective by race/ethnicity

- Maintaining brain health or mental sharpness
- Improving brain health or mental sharpness
- Reversing dementia
- Delaying dementia

Q7: How effective do you think taking vitamins or dietary supplements are at…extremely effective, very effective, somewhat effective, not very effective, not at all effective.
Adults who take supplements for brain health believe they are effective

<table>
<thead>
<tr>

Q7: How effective do you think taking vitamins or dietary supplements are at…extremely effective, very effective, somewhat effective, not very effective, not at all effective.

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons … No, never; Yes, currently taking; Yes, took in the past.

Adults age 18 and older who currently take a supplement for brain health or mental sharpness or have taken one in the past, are significantly more likely to believe the supplement is extremely or very effective. Relatively few adults who have never taken a supplement for these reasons see them as effective.
Adults who have never taken a supplement for a reason related to brain health report better brain health

Adults age 18 and older who previously took a supplement for a brain-related issue are much less likely to say their brain health is excellent or very good.

Percent who rate their brain health excellent or very good by their use of supplements for each reason

Q3: How would you describe each of the following at this point in time? Would you say it is excellent, very good, good, fair, or poor [Your brain health or mental sharpness]

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons … No, never; Yes, currently taking; Yes, took in the past
More than one-third take at least one brain-related supplement

Overall, 36 percent of adults age 18 and older and 44 percent of adults age 50 and older take at least one of the brain-health related supplements listed here – about 90 million people overall.

Among supplements often marketed for brain health, the most commonly used was Omega-3. Relatively few adults take proprietary supplements like Prevagen, which is said to be derived from jellyfish.

Although comparatively few adults age 18 and older take proprietary brain health supplements, the percent represents more than 10 million adults.

Q9: Please indicate which vitamins or dietary supplements you currently take [Check all that apply]
Q9b: Do you take fish oil for any of the following reasons? Heart health, Brain Health, Neither

*BriteSmart, Cognifen, Cognitex with Brain Shield, HeadStart, Neurofuzian, Neuro-PS, Mental Alertness, Lifeshield Mind Force, MindRise, Prevagen, Other

Adults who eat the recommended amount of fruits and vegetables\(^6\) report better brain health

Adults age 18 and older who consume the recommended amount of fruits and vegetables each day are more likely to report their brain health and overall health as excellent or very good compared to those who do not, regardless of supplement use.

\(^6\) See [https://www.choosemyplate.gov](https://www.choosemyplate.gov) (Amount varies by age and gender)
IMPLICATIONS
Implications

**Millions of adults currently take vitamins or dietary supplements.** Older adults take them at far higher rates than younger adults. Almost half of Americans incorrectly think that dietary supplements must be proven safe and effective before they are put on the market. Many are extremely or very concerned about the safety, the effectiveness, and purity of the ingredients.

**Almost one-quarter of adults overall (26 percent of adults age 50+) take at least one supplement for brain-health reasons.** That means that 58 million Americans (30 million age 50+) buy supplements believing it will help their brain health. Eight million adults age 50+ (8%) are taking a dietary supplement thinking it will actually reverse dementia.

**Healthy eating and other healthy habits are beneficial to brain health.** Adults age 18 and older who consume the recommended amounts of fruits and vegetables report better brain health than adults who do not, regardless of their supplement use. Meeting these dietary recommendations is related to engagement in other healthy behaviors. This suggests that education about engagement in brain-healthy behaviors can potentially lead to maintaining or improving brain health.

---

Methodology

• **Objectives**: The study examines U.S. adults’ use and knowledge of vitamins and dietary supplements.

• **Methodology**: Online probability-based survey via Ipsos KnowledgePanel®.

• **Qualifications**: Age 18 and older

• **Sample**: Ipsos KnowledgePanel®, n=2,292. (Includes oversamples for African Americans/Blacks, Hispanics/Latinos, Asians, and adults age 70 and older).

• **Interviewing Dates**: January 29-February 7, 2019.

• **Weighting**: The data were weighted according to CPS benchmarks including gender, age, race/ethnicity, education, census region, income, home ownership, and metropolitan area.

• **Questionnaire length**: 18.1 minutes (median).

• **Confidence Interval**: Total sample: ± 2.4 percentage points.

For more information about this survey, please contact Laura Mehegan at lmehegan@aarp.org.
About AARP

AARP is the nation’s largest nonprofit, nonpartisan organization dedicated to empowering Americans 50 and older to choose how they live as they age. With nearly 38 million members and offices in every state, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands, AARP works to strengthen communities and advocate for what matters most to families with a focus on health security, financial stability and personal fulfillment. AARP also works for individuals in the marketplace by sparking new solutions and allowing carefully chosen, high-quality products and services to carry the AARP name. As a trusted source for news and information, AARP produces the nation’s largest circulation publications, AARP The Magazine and AARP Bulletin. To learn more, visit www.aarp.org or follow @AARP and @AARPadvocates on social media.
Taking vitamins or dietary supplements viewed as less important to health than other activities

A large majority of adults age 18 and older feel that sleep, stress management, healthy eating, and exercise are the most important activities for health. Taking vitamins or nutritional supplements is close to the bottom of the list.

Q3: How important do you feel each of the following activities are to your health? [Taking vitamins or dietary supplements] Extremely important, very important, somewhat important, not very important, not at all important
Most believe vitamins are effective when it comes to a deficiency

Significantly more women than men take supplements for bone health and to prevent or correct a deficiency. With increasing age, significantly more adults take supplements for these same reasons.

Percent who said extremely or very effective and percent who currently take a supplement for each reason

Percent who currently take a supplement for each reason by gender

*43% of adults age 50 and older currently take a supplement to maintain bone health.

Q7: How effective do you think taking vitamins or dietary supplements are at...extremely effective, very effective, somewhat effective, not very effective, not at all effective.

Q8: Please indicate whether or not you have taken vitamins or dietary supplements for the following reasons... No, never; Yes, currently taking; Yes, took in the past.
The most commonly taken supplements are multi-vitamins and vitamin D

Two-thirds of adults age 18 and older take at least one of the vitamins listed.

Among adults age 50 and older who currently take a B vitamin, they currently take the following:
- B9 – 4%
- B12 – 48%
- B Complex – 62%

Q9: Please indicate which vitamins or dietary supplements you currently take. (Check all that apply)
Vitamin use differs by certain demographic characteristics

Women and older adults are more likely to take certain vitamins. Compared to the general population, Asians are less likely to take some types of vitamins.

Q9: Please indicate which vitamins or dietary supplements you currently take. (Check all that apply)

- Multi-vitamins (41% vs. 34%)
- Vitamin D (41% vs. 29%)
- Vitamin B (24% vs. 18%)
- Calcium (26% vs. 14%)
- Iron (16% vs. 9%)

Significantly more adults from older generations* than younger generations take...
- Vitamin D (51% vs. 22%)
- Vitamin B (35% vs. 14%)
- Calcium (30% vs. 12%)
- Magnesium (19% vs. 8%)

Significantly fewer Asians compared to the general population take...
- Vitamin C (16% vs. 25%)
- Vitamin E (6% vs. 12%)
- Vitamin B (12% vs. 21%)

*Silent/Greatest generation compared to Gen-Z/Millennials.
Good nutritional habits are related to other healthy habits

Regardless of whether or not they take supplements, adults age 18 and older who consume the dietary recommendations for fruits and vegetables are more likely to engage in other brain-healthy activities.

Adults turn to medical professionals for information

Doctor, nutritionists, and pharmacists are the most important sources of information in determining whether or not to take a vitamin or dietary supplement. Government agencies are in a distant second place. Advertisements and the media are not considered as important sources.

Q32: How important are each of the following as a source of information in determining whether or not to take a specific vitamin or dietary supplement? Extremely important, Very important, Somewhat important, Not very important, Not at all important.

Medical professionals (e.g., doctors, nutritionists, pharmacists, etc.); Reviews by resources such as WebMD, Consumer Reports, Mayo Clinic, etc.; Friends and family/word of mouth; Media (e.g., television segments, news articles, etc.); Advertisements; Government agencies (e.g., the Food and Drug Administration).
