## METHODOLOGY

AARP Arizona commissioned a telephone survey among 1,000 registered voters age 40-plus in Arizona to learn about their experiences with family caregiving. An oversample of 200 respondents was used to increase registered voter respondents age 40-plus within Arizona who identify their ethnicity as Hispanic or Latino. The interviews were conducted in both English and Spanish.

The sample utilized an age-targeted landline and cell phone registered voter list obtained from Aristotal International. The sample database consisted of 2,300,326 registered voters age 40-plus in the State of Arizona. There are approximately 1,015,485 residents of Arizona age 40-plus who are not registered to vote, and there are approximately 1,136,671 registered voters age 40-plus who did not have a phone number on file that were not included in the sampling of this study.

Quotas were used in this study based on age and gender and were filled based on responses to questions in the questionnaire. They were designed to yield a proportional representation of the Arizona age 40-plus registered voter population.

Respondents were selected at random from the sample list to be dialed. American Directions Research Group (ADRG) asked to speak with the registered voter listed on the file. If that person was unavailable, ADRG asked to speak with another member of the household aged 40-plus who was registered to vote in Arizona. The interviews averaged 26 minutes in length. The survey has a margin of sampling error of  $\pm 3.1$  percent.

This annotation shows results from 1,000 registered voters interviewed from February 26 to March 26, 2019. The data collection and weighting were performed by ADRG. The data is weighted by age, gender, and ethnicity to reflect registered voters in Arizona age 40-plus, based on the sample source.

Percentages reported are rounded. For more information about the methodology, contact Terri Guengerich, AARP Research, [tguengerich@aarp.org](mailto:tguengerich@aarp.org), (202)434-6306.
