

Methodology

In June 2018, AARP engaged Alan Newman Research (ANR) to conduct a quantitative research study among registered voters in Tennessee ages 50+. Topics included likelihood of voting in the upcoming November elections for U.S. Congress and other offices, as well as issues of importance to voters such as financial security and retirement, Social Security and Medicare, prescription drugs, and healthcare.

ANR completed a total of 802 telephone interviews (584 via landline telephones and 218 via cell phone) to achieve Tennessee's base sample. All respondents were asked to verify their registered voter status in Tennessee before beginning the survey.

Respondents were screened to meet the following criteria:

- Age 50+
- Resident of Tennessee
- Registered voter in Tennessee

Survey length averaged 20 minutes.

Sample

A registered voter list of 2,287,739 voters in Tennessee, purchased from Aristotle, was utilized for this study. The list was randomly divided into 2,287 replicates of 1,000 voters each. Initially, 15 replicates were released for calling, with additional replicates being opened as necessary. In all, 25 replicates representing a total of 24,747 voter records were dialed to complete this study. Both landline and cell phones were included in this research.

The total sample of 802 respondents yields a maximum statistical error of $\pm 3.5\%$ at the 95% level of confidence. (This means that in 95 out of 100 samples of this size, the results obtained in the sample would be within ± 3.5 percentage points of the results obtained had everyone in the population been interviewed.)

Interviewing

The survey was launched on August 22, 2018 and closed on September 1, 2018. Interviewing was active between 5:30 p.m. and 9:00 p.m., with some additional calling done between 10:00 a.m. and 4:00 p.m. If necessary, up to 8 call attempts per telephone number were made to reach an eligible respondent. All numbers were called at multiple times of the day as well as days of the week to maximize each resident's opportunity for inclusion in the study.

Percentages of some questions may exceed 100% due to rounding or the use of multiple response question formats.

All data have been weighted by age, gender, race/ethnicity, and geographic distribution according to July 2018 Tennessee State Voter Registration Database statistics. Oversample data have been weighted by age, gender, and geographic distribution according to July 2018 Tennessee State Voter Database statistics.

Production Summary

NUMBER OF FULL COMPLETES	1126
TOTAL NUMBERS RELEASED	24,747
COOPERATION RATE (COOP3)	50.1%
REFUSAL RATE (REF3)	6.2%
RESPONSE RATE (RR3) ¹	5.3%

¹ This response rate formula (RR3) requires the calculation of 'e' which is the proportion of cases of unknown eligibility that are estimated to actually be eligible. The following formula was used to determine 'e': $e = \frac{\text{Complete} + \text{Terminate Early} + \text{Confirmed Household No Answer, Busy, and Answering Machine} + \text{Callbacks} + \text{Language Barrier}}{\text{Complete} + \text{Terminate Early} + \text{Confirmed Household No Answer, Busy, and Answering Machine} + \text{Callbacks} + \text{Language Barrier} + \text{Government/Business} + \text{Non-Working} + \text{Screened Out} + \text{Over Quota}}$.
